4. I feel that my relationships with my whānau are not good at present
5. I feel that my relationships with my whānau are very bad at present
The Outcomes Recording and Analysis (ORA) database is an online tool developed by Te Rau Matatini. The prime function of the ORA database is to generate accurate, timely, comprehensive, and useful Māori mental health service data. The reports created through the ORA database are based on the Hua Oranga Māori Mental Health Outcome Measurement questionnaire sets that are entered and updated by health service providers registered to access the ORA database.
